Tutorial 2  
Converting NFA to DFA

## Procedure

- **Step 1**

- Let  $Q'$  be a new set of states of the DFA.  $Q'$  is null at the start.
- Let  $T'$  be a new transition table of the DFA.

- **Step 2**

- Add the start state of the NFA to  $Q'$ .
- Add transitions of the start state to the transition table  $T'$ .
- If the start state makes transitions to multiple states for some input alphabet, then treat those multiple states as a single state in the DFA.

# Procedure

- **Step 3**
  - If any new state is present in the transition table  $T'$ ,
    - Add the new state in  $Q'$ .
    - Add the transitions of that state in the transition table  $T'$ .
- **Step 4**
  - Keep repeating Step 3 until no new state is present in the transition table  $T'$ .
- **Step 5**
  - Determine the final states.
    - In the resulting DFA, all the states that contain the final state(s) of the NFA are treated as final states.

# Problem 1

- Convert the following NFA to DFA

## Transition table for the NFA

State / Alphabet	a	b
$\rightarrow q_0$	$q_0$	$q_0, q_1$
$q_1$	–	$*q_2$
$*q_2$	–	–

## Step 1

- Let  $Q'$  be a new set of states of the Deterministic Finite Automata (DFA).
- Let  $T'$  be a new transition table of the DFA.

## Step 2

- Add transitions of start state  $q_0$  to the transition table  $T'$ .

State / Alphabet	a	b
$\rightarrow q_0$	$q_0$	$\{q_0, q_1\}$

## Step 3

- A new state present in the set  $Q'$  is  $\{q_0, q_1\}$ .
- Add transitions for the set of states  $\{q_0, q_1\}$  to the transition table  $T'$ .

State / Alphabet	a	b
$\rightarrow q_0$	$q_0$	$\{q_0, q_1\}$
$\{q_0, q_1\}$	$q_0$	$\{q_0, q_1, q_2\}$

## Step 4

- A new state present in the set  $Q'$  is  $\{q_0, q_1, q_2\}$ .
- Add transitions for the set of states  $\{q_0, q_1, q_2\}$  to the transition table  $T'$ .

State / Alphabet	a	b
$\rightarrow q_0$	$q_0$	$\{q_0, q_1\}$
$\{q_0, q_1\}$	$q_0$	$\{q_0, q_1, q_2\}$
$\{q_0, q_1, q_2\}$	$q_0$	$\{q_0, q_1, q_2\}$

## Step 5

- Since no new states are left to be added to the transition table  $T'$ , we stop.
- States containing  $q_2$  as its component are treated as final states of the DFA.

## Transition table for the DFA

- Finally, the transition table for the DFA is:

State / Alphabet	a	b
$\rightarrow q_0$	$q_0$	$\{q_0, q_1\}$
$\{q_0, q_1\}$	$q_0$	$\{q_0, q_1, q_2\}$
$\{q_0, q_1, q_2\}$	$q_0$	$\{q_0, q_1, q_2\}$

# DFA

## Problem 2

- Convert the following NFA to a DFA:

# Solution

- Transition table T' of the DFA:

State / Alphabet	0	1
$\rightarrow q_0$	$q_0$	$\{q_1, q_2\}$
$\{q_1, q_2\}$	$\{q_0, q_1, q_2\}$	$\{q_1, q_2\}$
$\{q_0, q_1, q_2\}$	$\{q_0, q_1, q_2\}$	$\{q_1, q_2\}$

# DFA

## Problem 3

- Convert the following NFA to a DFA:

# Solution

- Transition table T' of the DFA:

State / Alphabet	a	b
$\rightarrow q_0$	$\{q_1, q_2\}$	$\emptyset$
$\{q_1, q_2\}$	$\{q_1, q_2\}$	$q_2$
$q_2$	$\{q_1, q_2\}$	$q_2$
$\emptyset$	$\emptyset$	$\emptyset$

# DFA
